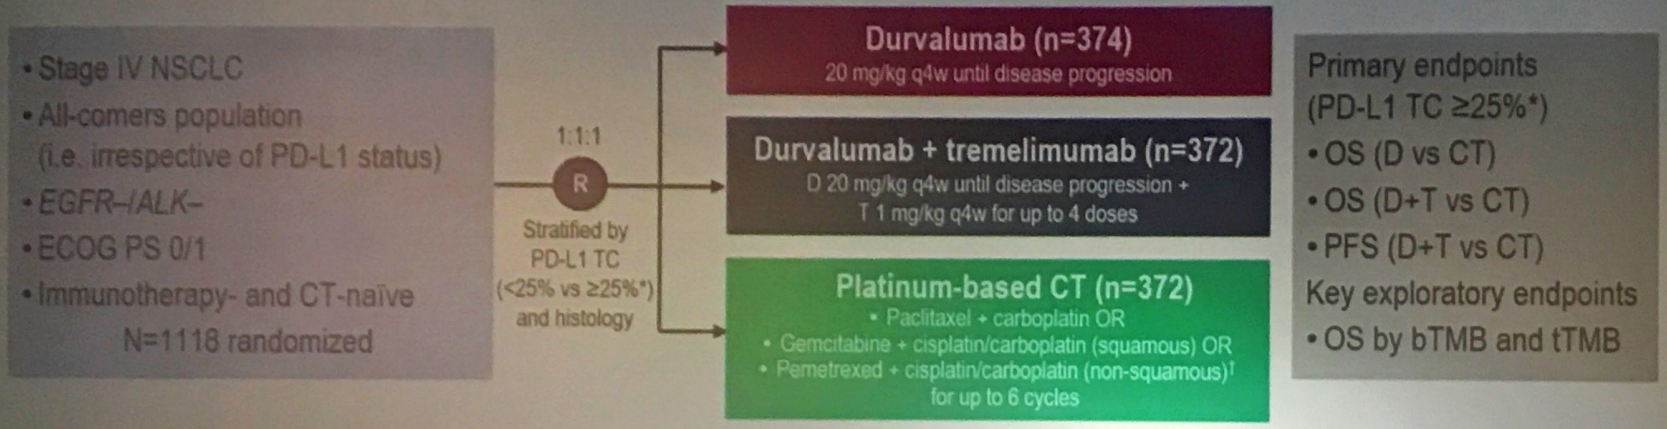
Background

- Durvalumab (anti-PD-L1) is approved for unresectable, Stage III NSCLC and has shown clinical activity in heavily pretreated patients with mNSCLC in Phase 2 and 3 trials[1,2]

MYSTIC study design: Phase 3, open-label, multicenter study[3]



*Ventana PD-L1 (SP263) assay using newly acquired or archival (<3 months) tumor biopsy; †Followed by pemetrexed maintenance therapy if eligible; bTMB, blood tumor mutational burden; CT, chemotherapy; D, durvalumab; ECOG, Eastern Cooperative Oncology Group; mNSCLC, metastatic non-small cell lung cancer; OS, overall survival; PD-L1, programmed cell death ligand-1; PFS, progression-free survival; PS, performance status; T, tremelimumab; TC ≥25%, ≥25% of tumor cells with membrane staining for PD-L1; tTMB, tissue tumor mutational burden

Durvalumab and Tremelimumab: Mechanism of Action
PD-L1 expression leads to immune cell evasion
Inactive T cells
PD-1
PD-L1
Neoantigens
Active T cell
Tumor cells
Antigen-presenting cell
CD-80/86
CD-28
CTLA-4
Tremelimumab
High TMB may result in neoantigen release, leading to T cell activation
Durvalumab
PD-1
PD-L1
Durvalumab reverses immune suppression
Tumor cell death
Tremelimumab enhances T cell activation and expansion
Durvalumab and tremelimumab lead to anti-tumor activity via non-redundant pathways
CD-28, cluster of differentiation 28; CD-80/86, cluster of differentiation 80/86; CTLA-4, cytotoxic T-lymphocyte-associated protein-4

Blood Tumor Mutational Burden in MYSTIC

- bTMB was evaluated with the GuardantOMNI sequencing platform (Guardant Health) comprised of a 500-gene panel (1.0 Mb DNA footprint [coding regions only])
- The GuardantOMNI bTMB algorithm incorporates somatic single nucleotide variants and insertions/deletions and accounts for low tumor shedding or low ctDNA input
- The large bTMB dataset included baseline samples from 809 patients (72.4% of ITT) in the MYSTIC trial

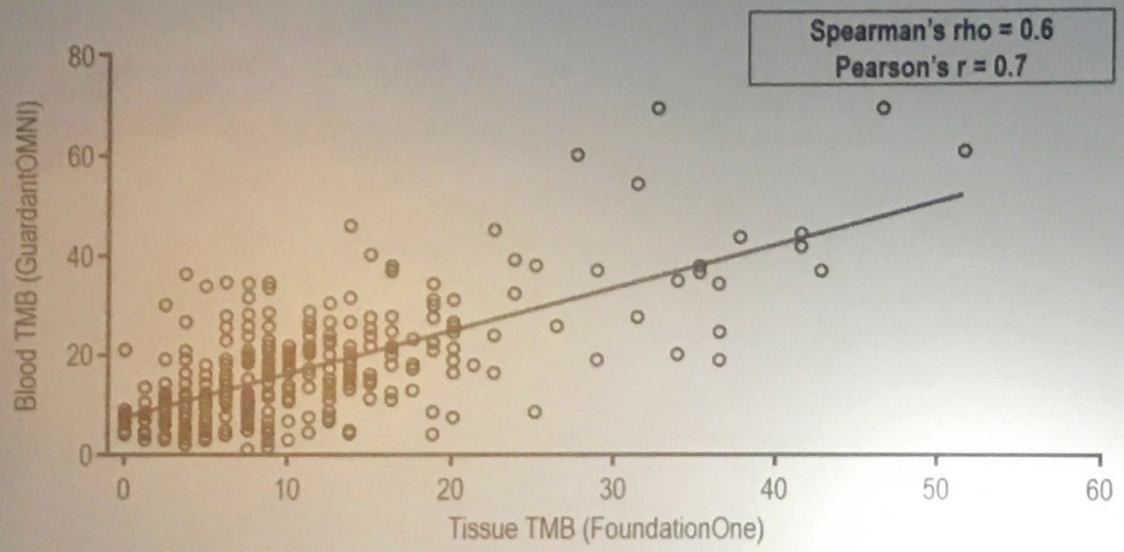
bTMB evaluable dataset

	Durvalumab (n=374)	Durvalumab + tremelimumab (n=372)	Chemotherapy (n=372)
Patients with bTMB data, n (%)	286 (76.5)	268 (72.0)	255 (68.5)

ITT, intent to treat

Correlation of Tissue and Blood Tumor Mutational Burden

- In 352 (31.5% of ITT) matched patient specimens, tTMB values positively correlated with bTMB values



Reference line in correlation plot is from linear regression

OS Analysis by bTMB ≥16 mut/Mb (ESMO I-O 2018)

- In preliminary analyses, OS was improved with durvalumab + tremelimumab vs CT in patients with bTMB ≥16 mut/Mb[1]

	D (n=111)	D+T (n=106)	CT (n=102)
mOS, months	11.0	16.5	10.5
(95% CI)	(7.8–16.1)	(10.3–22.9)	(8.8–12.4)
HR vs CT*	0.80	0.62	–
(95% CI)	(0.59–1.08)	(0.45–0.86)	
HR vs D*	–	0.82	–
95% CI)		(0.60–1.13)
